Life after Long Wharf – Warren Long joins Fundy Engineering

Fundy Engineering - one of New Brunswick's largest consulting engineering firms - gets even larger

(Saint John, NB – Tuesday, August 3, 2010) Fundy Engineering, based in New Brunswick for over 20 years, has added Warren Long, P.Eng., PMP, to its growing list of staff located across the Maritimes.

Mr. Long, an engineer and accredited Project Manager, was the Project Manager for the Long Wharf Head Office complex for Irving Oil Limited. With the cancellation of that project, Warren's expertise is now available to others.

"Projects have ranged from large, complex types, such as the Long Wharf "campus-style" head office project, to small risk management assessments of projects. After amassing over 30 years of experience, I thought it would be worthwhile to offer this experience to others," stated Warren.

The Long Wharf project involved co-ordination with architects from the USA, sourcing materials around the globe, liaising with local and federal government bodies, as well as community groups.

"Although my last position involved a complex matrix of stakeholders, owners and community groups, even relatively small projects require good oversight. Risk management has become a growing part of project management," elaborated Mr. Long.

Warren joined Fundy Engineering, one of New Brunswick's largest consulting engineering firms, due to its growth and ability to offer a broad range of services.

Gordon Mouland, President of Fundy Engineering, commented on the company's growth, "Fundy Engineering has grown from a three-person operation back in 1989, to one of the largest New Brunswick-based engineering firms - a three-province, multi-disciplinary operation that just keeps growing. We are interested in expanding our services to keep pace with what this region requires. There really isn't a need for companies and government bodies to reach outside New Brunswick for expert services, they are available right here. "

Project Management isn't just for construction projects, it also applies to expanding a business, efficiency reviews, product launches, and a host of other business initiatives. Basically, it involves managing the process between executing a project and achieving business goals.

Warren's experience managing projects emphasizes keeping costs and schedules on track, while also minimizing risk. He has worked with various Irving companies for the past 35 years, but now, through Fundy Engineering, is offering his project management expertise to others.

Fundy Engineering, an employee-owned firm, has offices in Charlottetown, Halifax and Saint John. Originally offering geotechnical and environmental engineering, it has expanded its services to include building services engineering, bio-resources engineering, structural engineering and project management.
